

Alex Kasem

Software Developer

As a software developer, I have worked on numerous web-based projects, on both the front-end as well as the back-end, building accessible, user-friendly, and mobile responsive web applications. Having worked with a range of technologies, my core competencies would include HTML5, CSS3, JavaScript (ES2018), React.js, Django, Bootstrap, and Git, with GitHub, version control.

I have experience in entrepreneurial development, product development / design, as well as tabletop game design. I have honed my teamwork skills through the military and research acumen while earning a bachelors of science degree in applied psychology. Having participated in an exchange student program in South Korea, I am comfortable traveling as well as culturally adaptable. I endeavor to become a seasoned software engineer by continuing to learn new concepts as well as iterating upon what I already know.
